

DEZZIV Brake & Go active brake is universal and is mounted on a wheelchair using a standard clamp

models of Brake & Go active brakes

Model: Classic

Classic is a simpler, cheaper version with an aluminum brake wheel and is intended for daily use.

Model: Top

The top model is technically more sophisticated, with a brake wheel and with a neoprene fiber reinforced fiberglass, which can be replaced. The Top model is constructed for demanding users and it can be used in extreme conditions such as rain or snow.

Model: PU

It is made on the basis of the Classic model and is specially adapted for PU tires

The first and only wheelchair brake which completely frees you and your assistants

DEZZIV Brake & Go active brake helps you with:

- Forward moving on the slope with your assistants
- Independent moving forward on the slope
- Backward moving on the slope with assistants
- Independent moving backward on the slope
- Starting off forward on the slope
- Starting off backward on the slope
- Climbing the stairs with assistants
- Climbing the stairs independently
- It replaces the standard brake
- With the brake lining, which can be replaced
- Push or pull the activation mode
- Applies to electrically driven wheels of a wheelchair
- **Handbikes:** Solves the problem of slipping the drive wheel! Automatically brakes the wheelchair and prevents it from unwanted moving backward.

The DEZZIV brake has been tested by a German wheelchair manufacturer.

It has also been tested at the Japan Assistive Products Evaluation Center.

DEZZIV Brake & Go active wheelchair brake

New on the world market

Innovations for the future of independent living

Going forward or backward up the ramp

Easy, switch DEZZIV *Brake & Go* active brake for driving forward or backward and go up the ramp. With assistant or completely independently. No fear, as soon as you stop running the wheelchair, or when your companion stops pushing you forward or backward, the wheelchair will automatically stop. When you want to go forward or backward once again, you can easily, without any interference continue going forward or backward. *Brake & Go* active brake will always protect against unwanted automatic wheelchair ride downwards. And what if you want to go counter? Again, quite simple, you switch the brake into neutral position and the wheelchair will still be blocked. Now you move a bit forward or backward and the brake will automatically release the wheelchair and you can move like that even if you want to go downwards applies when driving backward.

Going backward up the stairs

No fear – *Brake & Go* active brake is a huge help to your companion in climbing up the stairs, because whenever the wheelchair wants to automatically go down the stairs, our active brake will automatically stop the wheelchair. It also allows you to climb the stairs completely by yourself and thus completely free yourself.

Handbike

Solves the problem of slipping the drive wheel. Automatically brakes the wheelchair and prevents it from unwanted moving backward.
